MP3 Joiner is a lightweight software application whose sole purpose is to help you merge multiple audio files into a single track. Simple looks You are welcomed by a clean feature lineup that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so even rookies can master the entire process on the breeze. Files can be added to the list with the aid of the browse button, so you cannot rely on the drag-and-drop support. On the downside, you cannot add multiple files to the list, and you need to manually insert each audio file individually. Main features MP3 Joiner gives you the possibility to build up a list with the audio files that you want to merge, remove the items that you no longer need them, as well as arrange the order of the audio files by moving items up or down or sorting them in an alphabetical order. In order to complete the merging process, you are required to specify the filename and saving directory. By default, the application saves the mixed audio file to MP3 file format. Since it doesn't require much computer knowledge to set up the entire operation even rookies can learn to master it in no time. On the downside, you cannot trim specifying parts from the audio streams and apply special effects (e.g. flanger, echo, fade in or out). During our testing we have noticed that MP3 Joiner accomplishes the merging process very quickly and without errors. It leaves a minimal footprint on system resources, so your computer performance is not affected. Bottom line To sum it up, MP3 Joiner offers a simple software solution when it comes to helping you merge multiple audio items into a single file, and is suitable especially for less experienced users since it doesn't come packed with advanced features.DESCRPTION (adapted from the Abstract): Empirical evidence indicates that both the effective implementation and dissemination of evidence-based interventions are impeded by the lack of appropriate strategies to stimulate implementation processes. This problem has been exacerbated by the increased cost and time associated with the design and evaluation of interventions (referred to as "empirical" or "programmatically" development), and the lack of implementation support in a broad range of professional settings. This is a serious public health problem since behavioral health professionals in health care settings have the capacity to help prevent or ameliorate the effects of many of the modifiable risk factors that contribute to coronary heart disease, stroke, and
