In the left side, you can select the image dimensions, crop and the new resolution. You have the options to make it smaller (crop) or bigger (crop). You can also select the new resolution. To crop your image, you can take a rectangular selection box on the image. You can also make the image horizontal or vertical. After you have the selection, you can crop it with the preset size. If you don't like the cropped size, you can stretch or shrink it with the zoom. After you have the selection and crop, you can edit the image too. In the right side, you can change the color model, adjust the saturation, make it grayscale, adjust the image brightness or contrast, add post-croping noise filters, or work with the sketch style. To change the color model, you can select the best model and also define the color. And finally, you can add an effect, such as blemish removal and burn. You can also change the color model. Pixlr, on the other hand, is my go-to photo editing app for those times when I need a little bit of help. By the time you read this review, you'll be able to check it out for free for the next 30 days. Ironically, the Macbook Air is similarly massive and similarly terrible. Unlike the iPad Pro though, it's packed with truly excellent design chops and ironclad productivity features that make it an utter godsend for content creation. At least there's little you can't do on the Macbook Air with Lion. Yet, it's still a far better content creation device than the final iPad Pro. There's no getting around the fact that a MacBook Air is, at its core, far more useful as a creation platform than the iPad Pro. You may lament the lack of an actual keyboard and real-time trackpad, but there's no doubt that a MacBook Air offers a far better content creation experience.
