There's also a number of exciting new features for moving and transforming an individual object in the Compositing panel. To do this, navigate to the tools panel and choose the Transform and Rotate

tool (). With this tool selected, select a single object or group of objects you wish to move, rotate and transform. With the reset functionality enabled, you can now resize the transform window to a new size, and the transform window will reset to the center of the object or group. To change the direction of the transform, select the lock feature from the context menu and then select different directions (scale the object, flip around the object, turn along an axis, warp). The in-place Motion Warp tool now allows you to use the Vector Warp feature to warp an entire animation as a single, interactive step. To do this, select the Move tool, then enter the Vector Specials panel, and navigate to Vector Warp. Select a keyframe on your animation - the tool will calculate the warp between the first selected keyframe and the last keyframe in your animation, so it doesn't matter which one you choose. Adobe Color 16 now offers a new Diagram Maker mode to help you with making diagrams. By simply selecting whether you create a page style, an image style or an object style, you can select which layer formats to include in your diagram. Using the palette in both the Palette editor or Cycles panel, select one to three colors you want to include in your diagram, then add a caption to make your diagram more attractive.
